# TDD - Test Driven Drupal

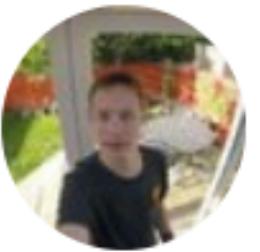

- PHP code
- Mixture of D7 and D8
- SimpleTest (D7)
- PHPUnit (D8)

- Senior Developer at Microserve
- Contrib module maintainer
- Occasional core contributor
- Sticker collector and elePHPant herder
- @opdavies
- oliverdavies.uk

I write and release contrib modules for the community.

I write custom modules for client projects.

**Tim Millwood**   
@timmillwood

Following

Anyone wanna become maintainer or co-maintain Override Node Options [#Drupal](#) module?

6:29 PM - 23 Feb 2012

# Why Test?

- Catch bugs earlier
- Piece of mind
- Prevent regressions
- Write less code
- Documentation
- Drupal core requirement - <https://www.drupal.org/core/gates#testing>
- More important with regular D8 releases

# Core Testing Gate

New features should be accompanied by automated tests.

If the feature does not have an implementation, provide a test implementation.

Bug fixes should be accompanied by changes to a test (either modifying an existing test case or adding a new one) that demonstrate the bug.

# Testing in Drupal - SimpleTest

- Based on <http://www.SimpleTest.org>
- In D7 core
- \*.test files
- All test classes in one file

# Testing in Drupal - PHPUnit

- Used in other PHP projects (e.g. Symfony, Laravel)
- In D8 core, but not default
  - \*.php files
  - One test class per file

# The PHPUnit Initiative

- <https://www.drupal.org/node/2807237>
- D8 core tests to change to PHPUnit
- Deprecate SimpleTest, remove in D9
- "A big chunk of old tests" converted on Feb 21st

# The PHPUnit Initiative

As part of the PHPUnit initiative **a considerable part of Simpletests will be converted to PHPUnit based browser tests on February 21st 2017**. A backwards compatibility layer has been implemented so that many Simpletests can be converted by just using the new BrowserTestBase base class and moving the test file. There is also a script to automatically convert test files in the conversion issue.

**Developers are encouraged to use BrowserTestBase instead of Simpletest as of Drupal 8.3.0**, but both test systems are fully supported during the Drupal 8 release cycle.

The timeline for the deprecation of Simpletest's WebTestBase is under discussion.

# **Types of Tests**

# Unit Tests

- `TestCase`
- Tests PHP logic
- No database interaction
- Fast to run

# Unit Tests

## Pros:

- Verify individual parts
- Quickly find problems in code
- Fast execution
- No system setup for the test run

# Unit Tests

## Cons:

- Rewrite on every refactoring
- Complicated mocking
- No guarantee that the whole system actually works

# Kernel Tests

- Kernel tests are integration tests that test on components. You can install modules.
- KernelTestBase

# **Kernel Tests**

## **Pros:**

- Verify that components actually work together
- Somewhat easy to locate bugs

# Kernel Tests

## Cons:

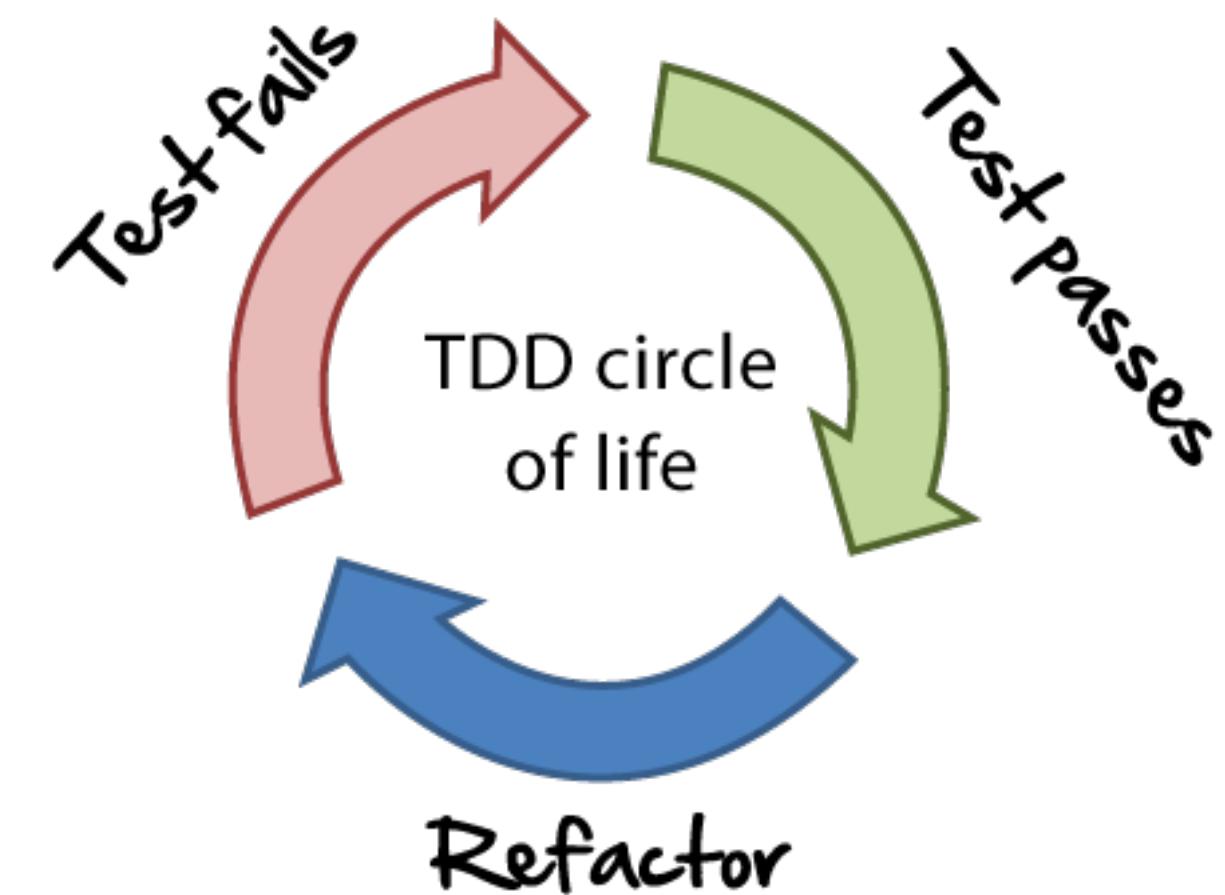

- Slower execution
- System setup required
- No guarantee that end user features actually work

# UI Tests

- Web/Functional/FunctionalJavascript
- DrupalWebTestCase (D7)
- WebTestCase, BrowserTestCase, JavascriptTestCase (D8)
- Tests functionality
- Interacts with database
- Slower to run
- With/without JavaScript (D8)

# Test Driven Development (TDD)

- Write a test, see it fail
- Write code until test passes
- Repeat
- Refactor when tests are green

# Porting Modules to Drupal 8

- Make a new branch  
`git checkout --orphan 8.x-1.x`
- Add/update the tests
- Write code to make the tests pass
- Refactor
- Repeat

# **Writing Tests (SimpleTest)**

```
# example.info
```

```
name = Example
```

```
core = 7.x
```

```
files[] = example.test
```

```
// example.test

class ExampleTestCase extends DrupalWebTestCase {

  public static function getInfo() {
    return array(
      'name' => 'Example tests',
      'description' => 'Web tests for the example module.',
      'group' => 'Example',
    );
  }

}
```

```
class ExampleTestCase extends DrupalWebTestCase {  
    . . .  
  
    public function testSomething {  
        $this->assertTrue(TRUE);  
    }  
}
```

# Writing Tests (PHPUnit)

- No need to load test classes explicitly.
- Add classes into tests/src directory.
- Extend BrowserTestCase.
- No getInfo method.

# Creating the World

```
public function setUp() {  
    // Enable any other required modules.  
    parent::setUp(['foo', 'bar']);  
  
    // Anything else we need to do.  
}
```

# Creating the World

```
$this->drupalCreateUser();
```

```
$this->drupalLogin();
```

```
$this->drupalCreateNode();
```

```
$this->drupalLogout();
```

# Assertions

- `assertTrue`
- `assertFalse`
- `assertNull`
- `assertNotNull`
- `assertEquals`  
`assertEqualss`

# Assertions

- assertRaw
- assertResponse  
assertSession()->statusCodeEquals()
- assertField
- assertFieldById
- assertTitle

# Assertions

- assertText  
assertSession()->pageTextContains()
- assertNoText  
assertSession()->pageTextNotContains()

# **Example: Toggle Optional Fields**

# Toggle Optional Fields

- [http://dgo.to/toggle\\_optional\\_fields](http://dgo.to/toggle_optional_fields)
- Adds a button to toggle optional fields on node forms using form alters
- Possible to override using an custom alter hook
- Uses unit and web tests

*Edit Article test* •

Show optional fields

Title \*

```
// Looping through available form elements...

// Only affect fields.
if (!toggle_optional_fields_element_is_field($element_name)) {
    return;
}

$element = &$form[$element_name];

if (isset($overridden_fields[$element_name])) {
    return $element['#access'] = $overridden_fields[$element_name];
}

// If the field is not required, disallow access to hide it.
if (isset($element[LANGUAGE_NONE][0]['#required'])) {
    return $element['#access'] = !empty($element[LANGUAGE_NONE][0]['#required']);
}
```

# What to Test?

- **Functional:** Are the correct fields shown and hidden?
- **Unit:** Is the field name check returning correct results?

# Unit Tests

```
// Returns TRUE or FALSE to indicate if this is a field.

function toggle_optional_fields_element_is_field($name) {
    if (in_array($name, array('body', 'language'))) {
        return TRUE;
    }

    return substr($name, 0, 6) == 'field_';
}
```

# Unit Tests

```
public function testElementNameIsField() {  
    ...  
  
    $this->assertTrue(  
        toggle_optional_fields_element_is_field('field_tags')  
    );  
  
    $this->assertTrue(

**Oliver Davies**

@opdavies

Changed my example TDD Drupal module  
[bit.ly/2AhZHLs](https://bit.ly/2AhZHLs) from functional tests to kernel  
tests. Run time dropped from 1.5 minutes to  
17 seconds. #Drupal #Drupal8

**opdavies/tdd\_dublin**

tdd\_dublin - A demo module for DrupalCamp Dublin to show test driven module development.

[github.com](http://github.com)

# Demo

- Testing has made me a better developer
- Testing can produce better quality code
- Use the right type of test for the right situation
- Writing tests is an investment
- OK to start small, introduce tests gradually
- Easier to refactor
- Tests can pass, but things can still be broken. Tests only report on what they cover.
