WHAT IS DRUSH?

"A command line shell and scripting interface for Drupal."

WHAT IS DRUSH MAKE?

"Drush make is an extension to drush that can create a ready-to-use drupal site, pulling sources from various locations. It does this by parsing a flat text file (similar to a drupal `.info` file) and downloading the sources it describes. In practical terms, this means that it is possible to distribute a complicated Drupal distribution as a single text file."
