

Drupal VM Generator

Drupal Bristol - April 2016

Oliver Davies - [@opdavies](#)

What is Drupal VM?

- Configurable Vagrant box for Drupal development
- Provisioned with Ansible
- Configured using YAML
- Built and maintained by Jeff Geerling

How do I use it?

- Download it from GitHub
- Copy and rename `example.config.yml` and `example.drupal.make.yml`
- Change contents as needed
- Start the VM

Down-sides

- Time consuming
- Redundant code

The Drupal VM Generator

- <https://www.oliverdavies.uk/blog/announcing-the-drupal-vm-config-generator>
- CLI application
- Generates files needed for Drupal VM based on interaction
- Very fast
- Only generates when you need

~ ➔ drupalvm-generate

Enter a hostname for Vagrant [drupalvm.dev]:

> example.com

Enter a Vagrant machine name [drupalvm]:

> exa

}

How do I get it?

```
# Download the archive.  
$ curl -s https://www.drupalvmgenerator.com/download -L -o drupalvm.phar  
  
# Make it executable.  
$ chmod +x drupalvm.phar  
  
# Move it somewhere accessible.  
$ mv drupalvm.phar /usr/local/bin/drupalvm
```

2. fish /Users/opdavies (fish)

```
~> drupalvm
```

Commands

Generate config.yml:

```
$ drupalvm config:generate
```

Generate drupal.make.yml:

```
$ drupalvm make:generate
```

Demo

Roadmap

- Keep up to date with Drupal VM stable releases
- New commands - downloading Drupal VM, updating existing files, adding vhosts
- User defaults and settings
