A UTILITY-FIRST CSS FRAMEWORK FOR RAPID UI DEVELOPMENT

A CSS FRAMEWORK
WITH NO CSS

A DIFFERENT WAY
TO WRITE CSS

- ▶ Developed by Adam Wathan and others
- ▶ Utility CSS class generator
- ▶ PostCSS
- ▶ Configured with JavaScript
- ▶ Some preprocessor features
- ▶ Can be used in addition to preprocessors
- ▶ Open source

```
.title {  
background-color: #3490DC;  
color: #FFF;  
display: block;  
font-size: 1.5rem;  
padding: 2rem;  
}
```

```
.text-2xl {  
  font-size: 1.5rem;  
}  
 
```

```
.bg-red {  
  background-color: #93140B;  
}  
 
```

```
.text-white {  
  color: #FFF;  
}
```

```
<div class="text-2xl bg-red text-white p-8">
  <p>Hello, PHP South Wales!</p>
</div>
```

Hello, PHP South Wales!

INSTALLATION

OPTION 1

<https://cdn.jsdelivr.net/npm/tailwindcss@dist/tailwind.min.css>

OPTION 2

```
npm install tailwindcss --save-dev
```

```
yarn add tailwindcss --dev
```

```
./node_modules/.bin/tailwind init [filename]
```

```
// tailwind.js
```

```
var colors = {  
  'transparent': 'transparent',  
  
  'black': '#222b2f',  
  'grey-darkest': '#364349',  
  'grey-darker': '#596a73',  
  'grey-dark': '#70818a',  
  'grey': '#9babb4',  
  'grey-light': '#dae4e9',  
  'grey-lighter': '#f2f2f2',  
  'grey-lightest': '#fafcfc',  
  'white': '#ffffff',  
  ...  
}
```

```
// app.css
```

```
@tailwind preflight;
```

```
@tailwind components;
```

```
@tailwind utilities;
```

```
// webpack.mix.js

let mix = require('laravel-mix');

require('laravel-mix-tailwind');

mix.postCss('build', 'assets/css/app.css')
    .tailwind();
```

```
// webpack.config.js
```

```
Encore
```

```
    .setOutputPath('public/build/')
```

```
    .setPublicPath('/build')
```

```
    .addStyleEntry('app', './assets/css/app.css')
```

```
    .enablePostCssLoader()
```

```
;
```

```
// postcss.config.js

module.exports = {
  plugins: [
    require('tailwindcss')('./tailwind.js'),
  ]
}
```

```
<head>  
  <title>Hello, World!</title>  
  <link rel="stylesheet" href="/build/app.css">  
  ...
```

```
.text-left {  
    text-align: left;  
}
```

```
.text-center {  
    text-align: center;  
}
```

```
.text-right {  
    text-align: right;  
}
```

```
.text-justify {  
    text-align: justify;  
}
```

...

```
<div class="text-2xl bg-red text-white p-8">
  <p>Hello, PHP South Wales!</p>
</div>
```

Oliver

}
```

- ▶ Colours (text and background)
- ▶ Font family, size, weight
- ▶ Leading (line height), tracking (letter spacing)
- ▶ Border widths, colours, radius
- ▶ Width, height, min/max width/height

- ▶ Padding, margin (positive and negative)
- ▶ Shadows
- ▶ Z-index
- ▶ Opacity
- ▶ SVG fill, stroke
- ▶ Screen sizes (breakpoints)

STATES

HOVER, FOCUS, ACTIVE, GROUP HOVER

. {state}{separator}{class}

```
<a class="bg-grey hover:bg-grey-dark focus:bg-grey-dark" href="/">  
    Home  
</a>
```

```
<a class="group">  
    
  
  <div class="no-underline group-hover:underline">  
    {{ speaker.name }}  
  </div>  
</a>
```

RESPONSIVE

.{screen}{separator}{class}

```
<div class="w-full md:w-1/2 lg:w-1/4">
  <p>Hello, World!</p>
</div>
```

**EXTRACTING
COMPONENTS**

**DO YOU NEED TO EXTRACT
A COMPONENT?**

```
{% for item in items %}  
  <a class="block py-3 px-4 text-sm text-grey" href="{{ item.url }}">  
    {{ item.title }}  
  </a>  
{% endfor %}
```

```
<h2>Adults</h2>
```

```
{% include 'class-list' with {
    classes: page.classes,
    type: 'adults',
} %}
```

```
<h2>Kids</h2>
```

```
{% include 'class-list' with {
    classes: page.classes,
    type: 'kids',
} %}
```

```
<a href="inline-block rounded text-sm py-2 px-3 text-white bg-red">  
    Click me!  
</a>
```

```
<a href="inline-block rounded text-sm py-2 px-3 text-white bg-green">  
    Click me too!  
</a>
```

```
# main.css
```

```
.button {  
  @apply .inline-block;  
  @apply .rounded;  
  @apply .text-sm;  
  @apply .py-2;  
  @apply .px-3;  
  @apply .text-white;  
}
```

```
<a href="button bg-red">  
    Click me!  
</a>
```

```
<a href="button bg-green">  
    Click me too!  
</a>
```

```
// table.less

.table-responsive {
  @apply .mb-4 .border .w-full;
  overflow-x: auto;
  overflow-y: hidden;
}

.table-responsive table {
  @apply .mb-0 .border-0 .whitespace-no-wrap;
}

.table {
  @apply .w-full .table-collapse;
}

.table tr:nth-child(odd) {
  @apply .bg-grey-lightest;
}

.table tr th {
  @apply .text-left .p-3 .bg-white;
}

.table td {
  @apply .px-3 .py-3 .border-t;
}
```

ADVANTAGES

- ▶ Quick to prototype and make changes
- ▶ Write less CSS
- ▶ More consistency
- ▶ Easy to customise, promote to components
- ▶ Mix and match with normal CSS
- ▶ Easy to write reusable plugins
- ▶ Use PurgeCSS to remove unused classes

DISADVANTAGES

- ▶ Extra build tools and steps
- ▶ Lots of classes in markup
- ▶ Large file size by default

A screenshot of a web browser window showing the homepage of the Refactoring UI website. The browser interface includes a title bar with the site name, a toolbar with various icons, and a menu bar with the user's name 'Oliver'. The main content area features a dark background with abstract geometric patterns. The Refactoring UI logo, consisting of the text 'Refactoring UI' with a blue circle around the 'I', is positioned at the top left. Below the logo, a large white text headline reads 'Tired of relying on Bootstrap?'. Underneath the headline, a subtext explains: 'Learn how to **design awesome UIs by yourself** using **specific tactics** explained from a **developer's point-of-view**'. A call-to-action section below the subtext includes the text 'Get notified whenever we publish something new →' followed by a form with a white input field labeled 'Enter your email' and a blue 'SUBSCRIBE' button. At the bottom of the page, there is a white footer bar containing two sections: 'DESIGN TIPS' on the left and 'View All' on the right.
