TDD -

Test Driven

Drupal

- PHP code
- Mixture of D7 and D8
- SimpleTest (D7)
- PHPUnit (D8)

- Senior Developer at Microserve
- Contrib module maintainer
- Occasional core contributor
- Sticker collector and elePHPant herder
- @opdavies
- oliverdavies.uk

Tim Millwood 

@timmillwood

Following

Anyone wanna become maintainer or co-maintain Override Node Options [#Drupal](#) module?

6:29 PM - 23 Feb 2012

Why Test?

- Catch bugs earlier
- Piece of mind
- Prevent regressions
- Write less code
- Documentation
- Drupal core requirement - <https://www.drupal.org/core/gates#testing>
- More important with regular D8 releases

Why Not Test?

- Don't know how
- No time/budget to write tests

Core Testing Gate

New features should be accompanied by automated tests.

If the feature does not have an implementation, provide a test implementation.

Bug fixes should be accompanied by changes to a test (either modifying an existing test case or adding a new one) that demonstrate the bug.

Testing in Drupal - SimpleTest

- Based on <http://www.SimpleTest.org>
- In D7 core
- *.test files
- All test classes in one file

Testing in Drupal - PHPUnit

- Used in other PHP projects (e.g. Symfony, Laravel)
- In D8 core, but not default
- *.php files
- One test class per file

The PHPUnit Initiative

- <https://www.drupal.org/node/2807237>
- D8 core tests to change to PHPUnit
- Deprecate SimpleTest, remove in D9
- "A big chunk of old tests" converted on Feb 21st

The PHPUnit Initiative

As part of the PHPUnit initiative **a considerable part of Simpletests will be converted to PHPUnit based browser tests on February 21st 2017**. A backwards compatibility layer has been implemented so that many Simpletests can be converted by just using the new `BrowserTestBase` base class and moving the test file. There is also a script to automatically convert test files in the conversion issue.

Developers are encouraged to use `BrowserTestBase` instead of `Simpletest` as of **Drupal 8.3.0**, but both test systems are fully supported during the Drupal 8 release cycle.

The timeline for the deprecation of Simpletest's `WebTestBase` is under discussion.

Types of Tests

Unit Tests

- `UnitTestCase`
- Tests PHP logic
- No database interaction
- Fast to run

Types of Tests

Unit Tests

Pros:

- Verify individual parts
- Quickly find problems in code
- Fast execution
- No system setup for the test run

Types of Tests

Unit Tests

Cons:

- Rewrite on every refactoring
- Complicated mocking
- No guarantee that the whole system actually works

Types of Tests

Kernel Tests

- Kernel tests are integration tests that test on components. You can install modules.
- `KernelTestBase`

Types of Tests

Kernel Tests

Pros:

- Verify that components actually work together
- Somewhat easy to locate bugs

Types of Tests

Kernel Tests

Cons:

- Slower execution
- System setup required
- No guarantee that end user features actually work

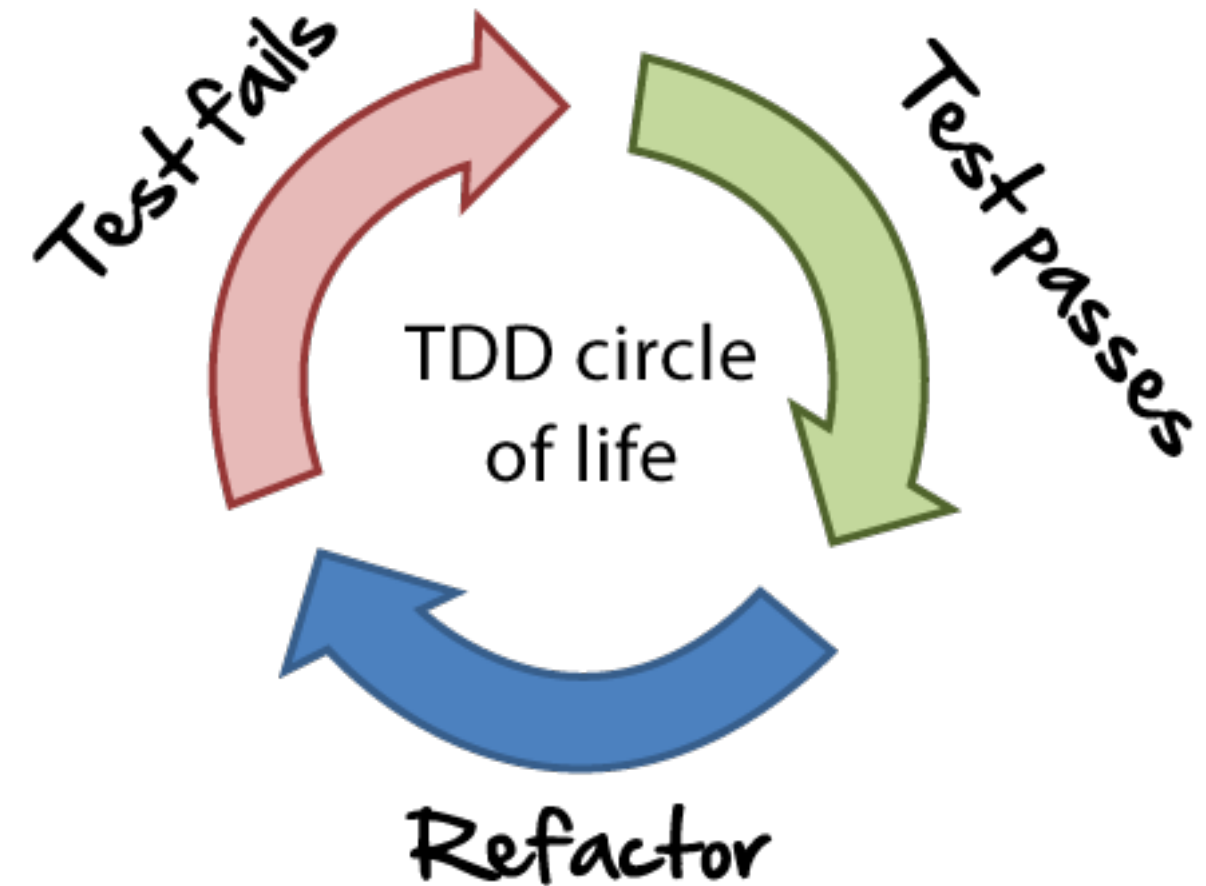

Types of Tests

Web/Functional/FunctionalJavascript Tests

- `DrupalWebTestCase` (D7)
- `WebTestCase`, `BrowserTestCase`, `JavascriptTestCase` (D8)
- Tests functionality
- Interacts with database
- Slower to run
- With/without JavaScript (D8)

Test Driven Development (TDD)

- Write a test, see it fail
- Write code until test passes
- Repeat
- Refactor when tests are green

Porting Modules to Drupal 8

- Make a new branch
`git checkout --orphan 8.x-1.x`
- Add/update the tests
- Write code to make the tests pass
- Refactor
- Repeat

Writing Tests (SimpleTest)

```
# example.info
```

```
name = Example
```

```
core = 7.x
```

```
files[] = example.test
```

```
// example.test
```

```
class ExampleTestCase extends DrupalWebTestCase {  
  
    public static function getInfo() {  
        return array(  
            'name' => 'Example tests',  
            'description' => 'Web tests for the example module.',  
            'group' => 'Example',  
        );  
    }  
  
}
```

```
class ExampleTestCase extends DrupalWebTestCase {  
  
    ...  
  
    public function testSomething {  
        $this->assertTrue(TRUE);  
    }  
  
}
```

Writing Tests (PHPUnit)

- No need to load test classes explicitly.
- Add classes into `tests/src` directory.
- Extend `BrowserTestBase`.
- No `getInfo` method.

Creating the World

```
public function setUp() {  
    // Enable any other required modules.  
    parent::setUp(['foo', 'bar']);  
  
    // Anything else we need to do.  
}
```

Creating the World

```
$this->drupalCreateUser();
```

```
$this->drupalLogin();
```

```
$this->drupalCreateNode();
```

```
$this->drupalLogout();
```

Assertions

- `assertTrue`
- `assertFalse`
- `assertNull`
- `assertNotNull`
- `assertEqual`
`assertEquals`

Assertions

- `assertRaw`
- `assertResponse`
`assertSession() -> statusCodeEquals()`
- `assertField`
- `assertFieldById`
- `assertTitle`

```
# Drupal 7
```

```
$ php scripts/run-tests.sh
```

```
# Drupal 8
```

```
$ php core/scripts/run-tests.sh
```

Running SimpleTest From The Command Line

`--color`

`--verbose`

`--all`

`--module`

`--class`

`--file`

Running PHPUnit From The Command Line

```
$ vendor/bin/phpunit
```

```
$ vendor/bin/phpunit [directory]
```

```
$ vendor/bin/phpunit --filter [method]
```

Example: Collection Class

Collection Class

- [http://dgo.to/collection class](http://dgo.to/collection_class)
- Adds a Collection class, based on Laravel's
- Provides helper methods for array methods
- Drupal 7, uses xautoload

```
$collection = collect([1, 2, 3, 4, 5]);
```

```
// Returns all items.
```

```
$collection->all();
```

```
// Counts the number of items.
```

```
$collection->count();
```

```
// Returns the array keys.
```

```
$collection->keys();
```

```
namespace Drupal\collection_class;

class Collection implements \Countable, \IteratorAggregate {
    private $items;

    public function __construct($items = array()) {
        $this->items = is_array($items) ? $items
            : $this->getArrayableItems($items);
    }

    public function __toString() {
        return $this->toJson();
    }

    ...
}
```

```
public function all() {  
    return $this->items;  
}
```

```
public function count() {  
    return count($this->items);  
}
```

```
public function isEmpty() {  
    return empty($this->items);  
}
```

```
public function first() {  
    return array_shift($this->items);  
}
```

Testing

```
public function setUp() {  
    $this->firstCollection = collect(['foo', 'bar', 'baz']);  
  
    $this->secondCollection = collect([  
        array('title' => 'Foo', 'status' => 1),  
        array('title' => 'Bar', 'status' => 0),  
        array('title' => 'Baz', 'status' => 1)  
    ]);  
  
    parent::setUp();  
}
```

Testing

```
public function testCollectFunction() {  
    $this->assertEqual(  
        get_class($this->firstCollection),  
        'Drupal\collection_class\Collection'  
    );  
}
```

Testing

```
public function testAll() {  
    $this->assertEqual(  
        array('foo', 'bar', 'baz'),  
        $this->firstCollection->all()  
    );  
}
```

Testing

```
public function testCount() {  
    $this->assertEqual(  
        3,  
        $this->firstCollection->count()  
    );  
}
```

Testing

```
public function testMerge() {  
    $first = collect(array('a', 'b', 'c'));  
    $second = collect(array('d', 'e', 'f'));  
  
    $this->assertEqual(  
        array('a', 'b', 'c', 'd', 'e', 'f'),  
        $first->merge($second)->all()  
    );  
}
```

Test result

 The test run finished in 0 sec.

Example: Toggle Optional Fields

Toggle Optional Fields

- [http://dgo.to/toggle optional fields](http://dgo.to/toggle_optional_fields)
- Adds a button to toggle optional fields on node forms using form alters
- Possible to override using an custom alter hook
- Uses unit and web tests

Edit Article test ⚙

Show optional fields

Title *

test

Example

```
// Looping through available form elements...

// Only affect fields.
if (!toggle_optional_fields_element_is_field($element_name)) {
    return;
}

$element = &$form[$element_name];

if (isset($overridden_fields[$element_name])) {
    return $element['#access'] = $overridden_fields[$element_name];
}

// If the field is not required, disallow access to hide it.
if (isset($element[LANGUAGE_NONE][0]['#required'])) {
    return $element['#access'] = !empty($element[LANGUAGE_NONE][0]['#required']);
}
```

What to Test?

- **Functional:** Are the correct fields shown and hidden?
- **Unit:** Is the field name check returning correct results?

Unit Tests

```
// Returns TRUE or FALSE to indicate if this is a field.  
  
function toggle_optional_fields_element_is_field($name) {  
    if (in_array($name, array('body', 'language'))) {  
        return TRUE;  
    }  
  
    return substr($name, 0, 6) == 'field_';  
}
```

Unit Tests

```
$this->assertTrue(  
    toggle_optional_fields_element_is_field( 'field_tags' )  
);
```

```
$this->assertTrue(  
    toggle_optional_fields_element_is_field( 'body' )  
);
```

```
$this->assertFalse(  
    toggle_optional_fields_element_is_field( 'title' )  
);
```

 The test run finished in 0 sec.

Takeaways

- Testing has made me a better developer
- Testing can produce better quality code
- Writing tests is an investment
- OK to start small, introduce tests gradually
- Easier to refactor
- Tests can pass, but things can still be broken. Tests only report on what they cover.

Thanks!
